

Take the guesswork out of managing your security posture

GAIN GREATER INSIGHT

- + Aggregate data sets across security, cloud networking, and endpoint technologies
- + Dynamically model hybrid environments to visualize and assess efficacy of security controls and network segmentation
- + Understand cyber exposure, prioritize vulnerabilities, and determine optimal remediation strategy

MAKE SMARTER DECISIONS

- + Have disparate data-sets available at your fingertips at-all-times
- + Leverage smart automation to increase security efficacy
- + Get context for smarter incident management

MAXIMIZE RESOURCES

- + Automate with context at greater scale
- + Increase speed and accuracy of decision making
- + Create a common view, processes, and communications to eliminate silos between security and IT

ACHIEVE COMPLIANCE, MITIGATE RISK

- + Simplify and automate compliance assessment with one system for the entire hybrid infrastructure
- + Develop and implement a unified process for change management
- + Create customized risk and compliance reporting in a singular view

BUILD BUSINESS RESILIENCY

- + Validate changes before mistakes are made
- + Understand vulnerabilities and exposure before they become a threat
- + Achieve continuous compliance as new regulations are issued

Integrates with over 150 networking, security, cloud and IT solutions

Skybox® Security Posture Management Platform

Skybox provides a centralized, automated and vendor-agnostic approach for security policy management and vulnerability and threat management. Skybox is the only platform that gives enterprises the ability to collectively visualize and analyze hybrid and multi-cloud networks, providing full context and understanding of their attack surface.

- + Create mature, consistent and enterprise-wide security posture management programs
- + See every inch of your organization to better protect it
- + Stay ahead of a dynamically changing attack surface
- + Gain the context you need to solve security challenges better and faster
- + Get ahead of incidents and act with confidence
- + Manage cyber exposure at scale
- + Optimize resources across organizational silos

**Skybox gives you total confidence in your security posture.
SECURE MORE. LIMIT LESS.**

One platform. One unified approach across security policy management and vulnerability and threat management.

SKYBOX SECURITY POLICY MANAGEMENT (SPM)

We enable security and network teams to continuously analyze and understand attack surfaces. With our unique analytics capabilities, you can make informed decisions on how to strengthen overall security posture. You can ensure consistent and effective configuration compliance, rule-based optimization, and change automation across traditional networks, next-generation firewalls, virtualized environments, public clouds, and more.

- + Automatically analyze rule sets, platform configurations, and usage information across hybrid and multi-cloud environments for compliance reporting, rule-based optimization, and policy re-certification.
- + Develop an accurate map of your entire hybrid and multi-cloud infrastructure, visualize your network topology, and run network segmentation analysis to accurately model your attack surface and understand your security posture.
- + Efficiently orchestrate and automate your network, firewall, cloud and security infrastructure change management processes.
- + Leverage customizable, context-aware workflows that automate the provisioning, deprovisioning, recertification, and normalization of application connectivity and firewall rules.
- + Enable connectivity while maintaining continuous compliance, closing security gaps, and limiting vulnerability exposures.

SKYBOX VULNERABILITY AND THREAT MANAGEMENT (VTM)

Our unique threat and context aware analytics engine aggregates a wide range of data from multiple sources including scanners, network infrastructure, various configuration databases, and non-scannable assets. We don't just serve up this data and information, we provide risk scoring and remediation prioritization of vulnerabilities based on asset prioritization, exploitability, and exposure analysis.

- + Automatically map and visualize your attack surface to determine the best remediation options to reduce cybersecurity risk exposure on a continuous basis.
- + Gain full context of your attack surface to find where you are exposed to cyberattacks, quantify the risks of exploitation, prioritize vulnerabilities and provide optimal remediation options to reduce the highest levels of risk.
- + Receive verified and up-to-the minute contextualized threat intelligence in one consolidated source from the Skybox Research Lab.

ABOUT SKYBOX

Over 500 of the largest and most security-conscious enterprises in the world rely on Skybox for the insights and assurance required to stay ahead of their dynamically changing attack surface. The Skybox Security Posture Management Platform delivers complete visibility, analytics, and automation to quickly map, prioritize, and remediate vulnerabilities across your organization.
