

TRAINING COURSE

Skybox Change Manager

Overview

Change Manager training provides the practical experience required to implement and execute Change Manager workflows to manage and monitor firewall change management processes.

The concepts discussed are reinforced with interactive exercises to give learners hands-on experience in using and navigating the product's user interface and data flow.

Who Should Attend This Training Course?

This course is intended for the following participants:

Firewall administrators, security analysts, network operations engineers, compliance officers, security auditors, risk managers, change agents, etc.
