

Maintain continuous compliance and alleviate audit pressure

Reduce cybersecurity risks and costs associated with network security policy non-compliance

Challenges

As organizations continue their digital transformation, compliance is becoming more difficult. Organizations are obliged to comply with applicable industry and country regulations, as well as their own internal policies. To make matters worse, regulations are changing in response to our increasingly digital lives. It's an uphill battle to stay on top of changes, particularly with limited compliance budgets and legacy processes.

The cost of non-compliance is not only expensive, but also largely hidden. A failed audit can result in business disruption, legal fees, reputational damage and customer churn.

Obstacles to achieving compliance

Organizational

- + Limited or shrinking compliance budgets
- + Increased reporting requirements i.e. to executives, board
- + Updated corporate best practices for data governance and cyber hygiene
- + Disparate corporate processes due to mergers and acquisitions

Technological

- + Changing corporate network configurations
- + Legacy processes

External factors

- + Regulatory changes
- + New partners, vendors or suppliers

What's needed

To understand your compliance status, you need complete visibility into digital environments and the tools to continuously comply with applicable regulations. You need a platform that gathers information about security status from enterprise, cloud, and OT environments together and evaluates them against your applicable compliance frameworks. Data analysis and automation help remediate vulnerabilities, automate change management and prepare customized reports.

Outcomes

- + Improve business continuity and avoid the costs of a failed audit
- + Gain executive visibility into compliance posture
- + Free up time for IT to focus on strategic initiatives that benefit the business

Why Skybox?

Achieve a holistic view of your attack surface

- + Leverage out-of-the-box assessments for PCI-DSS, NERC, NIST, STIG and more
- + Configure custom policy templates for your own unique needs
- + Unify management of internal and external policies
- + Analyze rules and access paths across your hybrid network
- + Continuously validate device configurations from a central location

Streamline compliance processes

- + Automate and schedule audits and compliance reporting
- + Simplify and validate changes with automated change management workflows
- + Track compliance daily with automated workflows
- + Automate your rule recertification process

Reduce the risk of compliance violations

- + Continually assess configurations for vulnerabilities and policy violations
- + Manage policy violations and exceptions with custom workflows

ABOUT SKYBOX SECURITY

Over 500 of the largest and most security-conscious enterprises in the world rely on Skybox for the insights and assurance required to stay ahead of their dynamically changing attack surface. Our Security Posture Management Platform delivers complete visibility, analytics, and automation to quickly map, prioritize, and remediate vulnerabilities across your organization.
