- + **Best Vulnerability Management Solution,** SC Awards 2021

### Management team

- + **CEO** | Mordecai Rosen
- + **Chief Financial Officer** | Todd Hollands
- + **Chief Marketing Officer** | Corey Williams
- + **Chief Product Officer** | Haggai Polak
- + **CTO/VP of R&D** | Ron Davidson
- + **Chief People Officer** | Paula Ewanich

### Skybox Security Posture Management Platform

The Skybox Security Posture Management platform provides security, IT, and OT teams the ability to visualize and analyze hybrid, multi-cloud, and OT networks, providing full context and understanding of their attack surface.

### The secret sauce

The Skybox platform aggregates essential data from a wide range of security, cloud, and network technologies to create a network model that visualizes all security controls and network configurations. With the model, we conduct exposure analysis to determine which attack vectors or network paths could be used to gain access to vulnerable systems. Then we uniquely calculate risk scores by factoring in CVSS severity, exploitability, asset importance, and asset exposure. You can then choose the best remediation option based on risk and business impact assessments.

### Strategic technology alliances and partners

Skybox has a deep bench of MSSP, GSI, reseller and distributor partners along with strategic technology alliances. We have integrations across the widest range of security, cloud, and network technologies in the industry. These integrations allow us to automatically collect, merge, model, and analyze data from these disparate products to provide you with a complete picture of your attack surface.
